THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

1. The amendment filed on 6/01/09 has been entered and fully considered.
2. The IDS filed on 7/22/09 is acknowledged.
3. Initialed Forms 1449 are attached to the instant Office Action in response to Applicant's request to initial the IDS filed on 7/29/08, 2/27/09, and 7/22/09.
4. Applicant's amendments to independent claims 1 and 21 overcome the rejection under 35 USC 101. The original disclosure as noted by Applicant clearly indicates a Path Manager having computing elements (i.e. original claims 10 and 24) and such a manager or a network planner is an independent entity as stated in paragraph 42 requiring its own hardware and software arrangement to predict cost effective path between network nodes.
5. Claims 1, 4, 6-10, 13, 15-26 are allowed.

Allowable Subject Matter

6. The following is an examiner's statement of reasons for allowance:
Claim 1 and all of its dependent claims (i.e. 4, 6-9, and 20) are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest
A path-manager-implemented method, comprising:
the path manager receiving one or more demands for service in a mesh network, which

network comprises a plurality of nodes interconnected by a plurality of links; and the path manager mapping each of the one or more demands onto a primary path and a restoration path in the network to generate at least one path plan for the one or more demands in the network, wherein the at least one path plan is generated as a function of (i) one or more cost criteria associated with the at least one path plan and (ii) a failure-related cross-connection criterion associated with the path plan by:

(a) calculating a set of node-disjoint path pairs for the one or more demands based on the

failure-related cross-connection criterion, wherein a node-disjoint path pair is calculated for each demand;

(b) identifying primary and restoration paths for each node-disjoint path pair in the set to generate a path plan for the one or more demands;

(c) determining whether the path plan satisfies the failure-related cross-connection criterion;

(d) saving, when the path plan satisfies the failure-related cross-connection criterion, the path plan;

(e) repeating steps (a)-(d) to generate two or more path plans that satisfy the failure-related cross-connection criterion; and

(f) selecting one of the path plans based on the one or more cost criteria.

It is noted that the closest prior art, Miyao, discloses minimizing transmission cost on each span and number of cross connects at each node for a single set of path calculation.

Claim 10 and all of its dependent claims (i.e. 13 and 15-19) are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest a path manager for a mesh communications network, the manager comprising one or more computing elements, wherein the manager is adapted to:

receive one or more demands for service in the mesh network, which network comprises a plurality of nodes interconnected by a plurality of links; and map each of the one or more demands onto a primary path and a restoration path in the network to generate at least one path plan for the one or more demands in the network, wherein the at least one path plan is generated as a function of (i) one or more cost criteria associated with the at least one path plan and (ii) a failure-related cross-connection criterion associated with the path by:

(a) calculating a set of node-disjoint path pairs for the one or more demands based on the failure-related cross-connection criterion, wherein a node-disjoint path pair is calculated for each demand;

(b) identifying primary and restoration paths for each node-disjoint path pair in the set to generate a path plan for the one or more demands;

- (c) determining whether the path plan satisfies the failure-related cross-connection criterion;
- (d) saving, when the path plan satisfies the failure-related cross-connection criterion, the path plan;
- (e) repeating steps (a)-(d) to generate two or more path plans that satisfy the failure-related cross-connection criterion; and
- (f) selecting one of the path plans based on the one or more cost criteria.

It is noted that the closest prior art, Miyao, discloses minimizing transmission cost on each span and number of cross connects at each node for a single set of path calculation.

Claim 21 and all of its dependent claims (i.e. 22-23) are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest

A path-manager-implemented method, comprising:
the path manager receiving one or more demands for service in a mesh network, which network comprises a plurality of nodes interconnected by a plurality of links; and
the path manager mapping each of the one or more demands onto a primary path and a restoration path in the network to generate at least one path plan for the one or more demands in the network, wherein the at least one path plan is generated as a function of (a) one or more cost criteria associated with the at

least one path plan and (b) a failure-related cross-connection criterion

associated with the path plan by:

calculating a first set of one or more path plans that satisfy the one or more cost criteria;

calculating a second set of one or more path plans that satisfy the failure-related cross-connection criterion;

determining whether the first and second sets have any path plans in common;

and

if not, then, until the first and second sets have at least one path plan in common,

relaxing the one or more cost criteria and recalculating the first set.

It is noted that the closest prior art, Miyao, discloses minimizing transmission cost on each span and number of cross connects at each node for a single set of path calculation.

Claim 24 and all of its dependent claims (i.e. 25-26) are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest a path manager for a mesh communications network, the manager comprising one or more computing elements, wherein the manager is adapted to:

receive one or more demands for service in the mesh network, which network comprises a plurality of nodes interconnected by a plurality of links; and

calculating a first set of one or more path plans that satisfy the one or more cost criteria;

calculating a second set of one or more path plans that satisfy the failure-related cross-connection criterion;

determining whether the first and second sets have any path plans in common;
and

if not, then, until the first and second sets have at least one path plan in common, relaxing the one or more cost criteria and recalculating the first set.

It is noted that the closest prior art, Miyao, discloses minimizing transmission cost on each span and number of cross connects at each node for a single set of path calculation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
